

PROJECT BENEFIT

- There is a lot of generation to the north and west of where the congestion is. The two new transmission lines and substations will help allow power generators in Pennsylvania and surrounding states to send more affordable electricity to consumers in the region, saving consumers over \$600 million in electric costs over the next 15 years and helping fix the electric bottleneck we talked about.

PROJECT BENEFIT

The Independence Energy Connection Project will:

- Allow power generators in Pennsylvania and other states to send more affordable electricity to consumers throughout the region
- Assist in alleviating the electric bottleneck in the region's power grid

New commercial and residential access to more affordable power will result in more than \$600 million in electric cost savings over the next 15 years for consumers throughout the region.

The Independence Energy Connection Project will bring investment in the region's local economies during the construction phase. Transource is committed to using local suppliers, services and workers when possible.
