

Transmission Line Routing Considerations

We aim to build transmission lines that power communities and the economy while minimizing community and environmental impacts.

Our project teams review a variety of environmental factors, including:

Current and proposed
public and private
land uses

Aesthetics and
visual impacts

Water quality, including
potential impacts on wetlands,
streams and water bodies

Wildlife, vegetation and
fisheries, including threatened
and endangered species

Soils and geology

Community and
neighborhood growth
and development

Historic and
archaeological sites

Existing infrastructure, such as
power lines, roads, railroads,
pipelines and renewables

Environmental &
social justice impacts

We identify and comply with all required local, state and federal permitting agencies.
